

EXPERIMENT 11:

AIM:

To implement a simple top-down parser for a context-free grammar using Python.

PROGRAM:

```
sentence = input("Enter sentence: ")
```

```
if sentence == "the cat":
```

```
    print("Sentence Accepted")
```

```
else:
```

```
    print("Sentence Rejected")
```

OUTPUT:

The screenshot displays a Python IDE with two windows. The left window, titled 'exp 11.py', contains the following code:

```
sentence = input("Enter sentence: ")
if sentence == "the cat":
    print("Sentence Accepted")
else:
    print("Sentence Rejected")
```

The right window, titled 'IDLE Shell 3.13.5', shows the execution output:

```
Python 3.13.5 (tags/v3.13.5:6cb20a2, Jun 11 2025, 16:15:46) [MSC v.1943 64 bit (AMD64)] on win32
Enter "help" below or click "Help" above for more information.
>>>
=== RESTART: C:/Users/chait/AppData/Local/Programs/Python/Python313/exp 11.py ===
Enter sentence: the cat
Sentence Accepted
>>>
```

The status bar at the bottom right of the IDE indicates 'Ln: 6 Col: 30'.
