

EXPERIMENT 9:

AIM:

To implement a rule-based part-of-speech tagging system using regular expressions in Python.

PROGRAM:

```
import re

words = ["running", "quickly", "cats", "beautiful"]

for word in words:

    if re.search("ing$", word):

        print(word, "- Verb")

    elif re.search("ly$", word):

        print(word, "- Adverb")

    elif re.search("s$", word):

        print(word, "- Noun")

    else:

        print(word, "- Adjective")
```

OUTPUT:

```
Python 3.13.5 (tags/v3.13.5:6cb20a2, Jun 11 2025, 16:15:46) [MSC v.1943 64 bit (AMD64)] on win32
Enter "help" below or click "Help" above for more information.
>>>
running - Verb
quickly - Adverb
cats - Noun
beautiful - Adjective
>>>
```
