

EXPERIMENT 18:

AIM:

To implement a simple First Order Predicate Calculus parser.

PROGRAM:

```
expr = input("Enter expression: ")
```

```
if "(" in expr and ")" in expr:
```

```
    print("Valid FOPC Expression")
```

```
else:
```

```
    print("Invalid Expression")
```

OUTPUT:

```
ex 18.py - C:/Users/chait/AppData/Local/Programs/Python/Python313/ex 18.py (3.13.5)
File Edit Format Run Options Window Help
expr = input("Enter expression: ")
if "(" in expr and ")" in expr:
    print("Valid FOPC Expression")
else:
    print("Invalid Expression")
