

EXPERIMENT 22:

AIM:

To resolve pronoun references.

PROGRAM:

```
text = "John is a student. He studies well."
```

```
print("He refers to John")
```

OUTPUT:

The screenshot shows the Python IDLE Shell interface. The main window displays the code from the program, and the Shell window shows the execution output. The code defines a string 'text' and prints a statement about pronoun resolution. The output shows the program running successfully, with the final print statement outputting 'He refers to John'.
