

EXPERIMENT 1:

1. Write program demonstrates how to use regular expressions in Python to match and search for patterns in text.

AIM: To demonstrate how to use regular expressions in Python to match and search for patterns in text.

PROGRAM:

```
import re

text = "My phone number is 9876543210"

# Search for a 10-digit number

pattern = r"\d{10}"

result = re.search(pattern, text)

if result:

    print("Number found:", result.group())

else:

    print("Number not found")
```

OUTPUT:

```
Python 3.13.5 (tags/v3.13.5:6cb20a2, Jun 11 2025, 16:15:46) [MSC v.194]
Enter "help" below or click "Help" above for more information.
>>>
Number found: 9876543210
>>>
Enter string: aaab
Accepted
>>>
```
